DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a nail lockout assembly, classified in class 227, subclass 8.
 - II. Claims 9-14, drawn to an adjustable angle magazine, classified in class 227, subclass 120.
 - III. Claims 15-20, drawn to an adjustable angle nail gun, classified in class 227, subclass 181.1.
 - IV. Claims 21-29, drawn to a nail loading assembly, classified in class 227, subclass 148.
 - V. Claims 30-36, drawn to a method of using a nail gun, classified in class 173, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group V and Group (I, II, III & IV) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus such as the apparatus that does not use collated nail strip.

Art Unit: 3721

3. Inventions Group IV and Group (I, II & III) are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group IV has separate utility such as a magazine that includes means to determine whether the correct nail has been loaded in the magazine. See MPEP § 806.05(d).

4. Inventions of Group (II & III) and Group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination (Group II & III) do not include the slotted guide member, a cover serrated member or a linkage bar as requires by the subcombination (Group I). The subcombination has separate utility such as aligning the nail in the magazine.

5. Inventions of Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group II has separate utility such as a nail gun with an adjustable angle nose casting assembly that use driver blade to engaging the nail. See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and by

Art Unit: 3721

their recognized divergent subject matter restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh K Truong whose telephone number is (571) 272-4472. The examiner can normally be reached on Mon-Thurs from 8:00 AM to 6:30 PM.
